

Exp 02: Create a simple cloud software application for Flight Reservation System using any Cloud Service Provider to demonstrate SaaS.

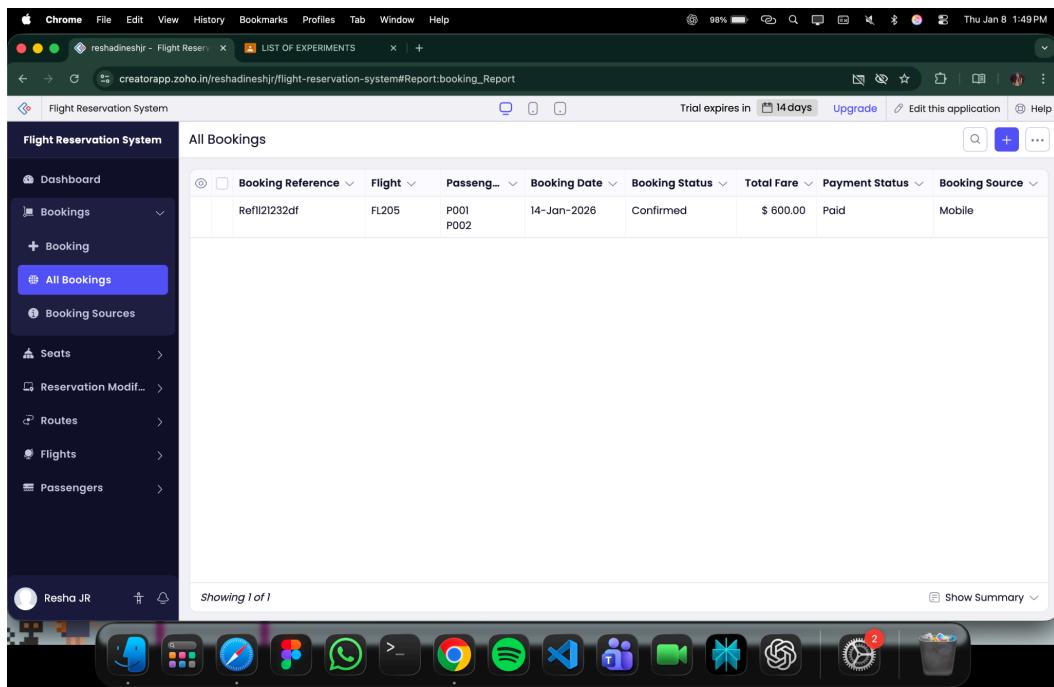

Aim

To create a simple cloud-based application using **Zoho Creator** and provide it as a service through the **Software as a Service (SaaS)** model, allowing users to access and use the application online.

Procedure

1. Login to Zoho Creator – Sign in to Zoho Creator using your credentials to access the app-building platform.
2. Create a New Application – Choose “Create Application” and select a blank app or template.
3. Design Forms & Modules – Add forms (e.g., user details, booking/property info) and fields as per requirements.
4. Set Workflows & Logic – Define workflows, validations, and automation to handle user actions.
5. Deploy the Application – Save and deploy the app on the Zoho cloud platform.
6. Provide SaaS Access – Share the application link with users so they can use it online as a SaaS.

Output

The screenshot shows a web browser window for Zoho Creator. The URL is creatorapp.zoho.in/reshadineshjr/flight-reservation-system#Report:booking_Report. The page title is "Flight Reservation System". The main content area displays a table titled "All Bookings" with the following data:

Booking Reference	Flight	Passenger	Booking Date	Booking Status	Total Fare	Payment Status	Booking Source
RefII2I232df	FL205	P001 P002	14-Jan-2026	Confirmed	\$ 600.00	Paid	Mobile

The left sidebar shows a navigation menu for "Flight Reservation System" with options like "Dashboard", "Bookings", "Booking Sources", "Seats", "Reservation Modif...", "Routes", "Flights", and "Passengers". The "Booking Sources" option is currently selected. The bottom of the screen shows a Mac OS Dock with various application icons.

Flight Reservation System

Result

Thus, a simple cloud-based application was successfully created and deployed using **Zoho Creator**, and it was provided as a **Software as a Service (SaaS)** model for end-users to access online.
